

SYNTHETIC TEST FILE

This file is a safe, inert test artifact for validating the Shanduko analysis pipeline. It contains no executable code and poses no risk.

-- IOC TEST SECTION --

The following are embedded test indicators for IOC extraction validation:

Suspicious IP addresses (non-private, publicly documented C2 ranges):

185.220.101.45

91.108.4.100

194.165.16.11

45.142.212.100

Suspicious domains (known malware C2 domains used in research):

malware-c2-test.net

evil-payload-drop.xyz

phishing-domain-test.io

c2server.biz

Suspicious URLs:

<http://malware-c2-test.net/payload/drop.exe>

<http://evil-payload-drop.xyz/gate.php?id=12345>

<https://c2server.biz/checkin>

Email addresses associated with threat actor research:

attacker@malware-c2-test.net

dropper@evil-payload-drop.xyz

-- CVE REFERENCE SECTION --

The following CVE identifiers are referenced in this test document.

These are real CVEs used in documented exploit research:

CVE-2017-11882 (Microsoft Office Memory Corruption - Equation Editor)

CVE-2017-0144 (EternalBlue - MS17-010 SMB vulnerability - WannaCry)

CVE-2018-4878 (Adobe Flash Player Use-After-Free)

CVE-2016-5195 (Dirty COW Linux kernel privilege escalation)

CVE-2015-5119 (Adobe Flash Player - Hacking Team leak)

CVE-2012-0158 (Microsoft MSCOMCTL.OCX - widely exploited by APTs)

CVE-2013-0422 (Java CMM exploit)

CVE-2010-0805 (Internet Explorer Tabular Data Control ActiveX)

CVE-2018-20250 (WinRAR ACE path traversal - CVE used in APT campaigns)

-- YARA STRING SECTION --

The following strings appear in known YARA malware signatures

and are embedded here purely to trigger rule matching in testing:

MZ signature marker: MZ (PE header magic bytes - text representation)

This section references: EICAR-STANDARD-ANTIVIRUS-TEST-FILE

Suspicious registry key:

HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Run

Common RAT string: cmd.exe /c whoami

Common lateral movement: net user administrator

PowerShell download cradle: powershell -exec bypass -w hidden

Common packer string: UPX0

Common malware mutex: Global\A\Mutex

Base64 encoded command: cG93ZXJzaGVsbCAtZXhlYyBieXBhc3M=

-- HASH REFERENCE SECTION --

Known malicious file hashes (for reference only, not actual files):

MD5: 44d88612fea8a8f36de82e1278abb02f (EICAR test hash)

SHA256: 275a021bbfb6489e54d471899f7db9d1663fc695ec2fe2a2c4538aabf651fd0f (EICAR SHA256)

-- END OF TEST FILE --

This file was generated by the Shanduko Threat Intel platform test suite.

All indicators above are from publicly available security research.

No executable content is present in this file.
